DLL Module 4: Environments that support Dual Language Learners

Session will be held on:

January 27, 2022

4:30 pm – 7:00 pm

Zoom Session

Environments that help children feel safe, accepted, understood, respected and challenged are created by culturally and emotionally supportive climates. Using a strength-based approach, these environments scaffold support for DLLs. Learning environments for DLLs encourage children to try out a new language and to feel safe as they take risks and experiment with language.

Participants will:

- Become familiar with creating and organizing the learning environment to support young dual language learners.
- Deepen their understanding of how teachers use culturally responsive classroom management practices to engage diverse learners
- Examine how the environment acts as a “third teacher”
