QR Code Quick Guide

What are QR Codes?

Quick Response codes, commonly known as QR codes, are barcodes that can carry information. **The information is easily translated by using a smartphone or camera. These devices can read the data in the QR code and show it to us on screen.**

Example of a QR Code. Try scanning it with your smartphone!

If you are unable to scan a QR code on your smartphone, there are free QR code readers available for download. You can download these through your phone's App store.

Utilizing QR codes can give you a vast amount of information without having to carry around a piece of paper or card to look up something later.

How to create a QR Code?

There are many websites that provide free QR code generators where you can simply enter your desired link and create a QR code immediately. One useful website is the-qrcode-generator.com/.

Steps to Creating and Using a QR Code:

1. Locate and copy your desired link. (For example, your early learning program's website).
2. Enter your link/data in the field, "Enter URL."
3. Click Download to download to your device.
4. Display your QR code where it's convenient for people to scan.
    a. You can make the QR code accessible in printed copies and/or on websites.
    b. Note: Families may need support in learning and accessing your content with these QR codes, so begin practicing together!
